Week 9 Evidence Index

SOC Introduction and Setup (Snort IDS) | Intern: Arumugapandi K | ID DG/SEPTEMBER/CYBER/177

Selected screenshots from Week-09.zip, matched to the assignment tasks and the report. Original files were not changed; where a figure is cropped, the crop is noted. Task 1 content comes from the intern's own notes in SOC_NOTES.pdf (report Sections 2 to 4).

Fig.	Original file	What it shows	Task	Report section
1	Generated diagram (not a screenshot)	Lab network architecture drawn for the report; also rebuilt as native shapes on slide 3	Task 2	5
2	Screenshot 2026-11-03 204708.png	ip -br addr: enp0s3 10.0.2.15/24 and enp0s8 192.168.100.3/24	Task 2	5
3	Screenshot 2026-11-03 174642.png	VirtualBox New VM wizard: SOC_SERVER, Ubuntu 26.04.1 server ISO	Task 2	6
4	Screenshot 2026-11-03 174731.png	Unattended install: user socadmin, installer host name SOC	Task 2	6
5	Screenshot 2026-11-03 190314.png	hostnamectl set-hostname soc-server and hostnamectl output	Task 2	6
6	Screenshot 2026-11-03 190508.png	Network config (ip addr, ip route) and ping tests to 8.8.8.8 and google.com	Task 2	6
7	Screenshot 2026-11-03 195054.png	SSH service active (running), accepted login from 10.0.2.2	Task 2	6
8	Screenshot 2026-11-03 193710.png	apt-cache: Unable to locate package snort; release info and apt sources	Task 3	7, 13
9	Screenshot 2026-11-03 195536.png	cmake 4.2.3, gcc 15.2.0, git 2.53.0	Task 3	7
10	Screenshot 2026-11-03 195726.png	LibDAQ configure summary (DAQ modules selected)	Task 3	7
11	Screenshot 2026-11-03 195908.png	ldconfig, libdaq 3.0.28.0, modules in /usr/local/lib/daq	Task 3	7
12	Screenshot 2026-11-03 201409.png	snort -V: Snort++ 3.12.4.0, DAQ 3.0.28.0	Task 3	7; slide 4
13	Screenshot 2026-11-03 201946.png	snort.lua settings (HOME_NET, EXTERNAL_NET) and config directory listing	Task 3	8
14	Screenshot 2026-11-03 201821.png	Configuration validated with 0 warnings; --daq-list (report and slide 4 use a cropped view)	Task 3	8; slide 4
15	Screenshot 2026-11-03 202232.png	Rules directory created; first local.rules listing (HTTP rule rev 1)	Task 4	9, 13
16	Screenshot 2026-11-03 210609.png	Final local.rules: SID 1000001 rev 1, SID 1000002 rev 2	Task 4	9; slide 5
17	Screenshot 2026-11-03 205807.png	Snort ICMP alerts, 192.168.100.4 to 192.168.100.3 (SID 1000001)	Task 5	10; slide 6 (cropped)
18	Screenshot 2026-11-03 210009.png	Python http.server on 192.168.100.3:80 returning HTTP 200	Task 5	11; slide 6
19	Screenshot 2026-11-03 210336.png	HTTP GET alert [1:1000002:2] (cropped to the last lines in report and slide 6)	Task 5	11; slide 6
20	Screenshot 2026-11-03 202717.png	Snort run ending "FATAL: see prior 1 errors"; 221 rules loaded	Task 3/4	13
21	Screenshot 2026-11-03 204016.png	VirtualBox error VERR_INTNET_FLT_IF_NOT_FOUND; both VMs aborted	Task 2	13

Not used

Screenshot 2026-10-31 151710.png: a Student Management System error window dated 31 October. It is unrelated to Week 9, so it was left out.

Screenshot 2026-11-03 210336.png also contains the same ICMP alerts as Figure 17, so only its HTTP alert lines are used.

What the evidence does not show

These points are stated in the report rather than filled in with assumed details:

- No **apt update / apt upgrade** output was supplied.
- The VirtualBox NAT Network (SOC-LAB-NET) dialog, the Kali terminal (ping and curl commands) and the Kali interface name eth1 were not captured. The Kali address 192.168.100.4 appears as the source in Snort alerts and the web server log.
- The full Snort start command and the CMake/make commands for the source build are not visible.
- The error line before "FATAL: see prior 1 errors" (Figure 20) is not visible, so its cause is not stated.
- The web server log shows two GET requests (15:29:32 and 15:29:50); the captured Snort screen shows an HTTP alert only for the second.
